Eliminate Paper-Based SBHC Enrollments
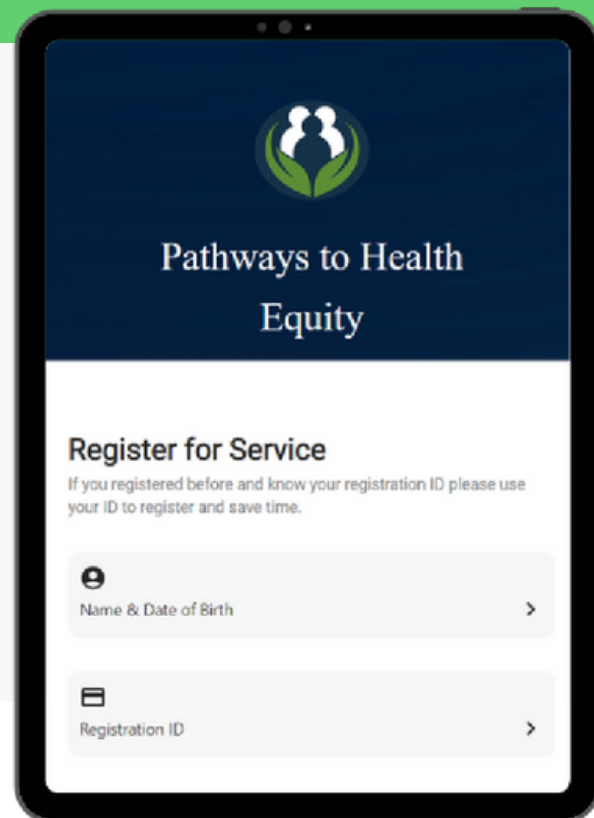

WellCheck

Let us help transform your enrollment process to drive utilization & increase funding!

Purpose-built for School Based Health Centers and trusted by Local Health Departments around the country. WellCheck's software is transforming how students, families and residents in rural and under-served communities are accessing healthcare.

Our web-based software digitally collects all required documentation, consent forms, insurance information, and medical history in the most efficient way possible.

Digital SBHC enrollments are deployed via weblinks and QR codes so are accessible on any device. The SBHC enrollments are easy, simple to navigate, and can be presented in multiple languages. Digital enrollments are collected in real-time and SBHC administrators have a dashboard for 24-7 access to all enrollment information.
