

MOBILE CLINICS & FIELD OUTREACH

# Workflow + Reporting for Mobile Programs & Field Teams

Mobile clinics and field outreach teams bring services to underserved communities — but without follow-up infrastructure, encounters don't become completed care. WellCheck provides the workflow and reporting backbone for mobile programs.

**ROLE: SUBCONTRACTOR TO MOBILE CLINIC OPERATORS**

FQHCs, hospitals, nonprofits, public health depts

EQUILOOP™ PLATFORM | MOBILE & FIELD PROGRAMS

## The Challenge

Mobile clinics can screen, refer, and connect — but without infrastructure to close the loop, encounters stay isolated. Funders want proof of impact, not just proof of presence.

### Field-Optimized Intake

Mobile-friendly screening, consent, and navigation workflows designed for low-connectivity field environments. Offline-capable data capture with automatic sync.

### Closed-Loop Referrals

Track referrals from mobile encounter to fixed-site completion. Automated follow-up, escalation views for aged referrals, and shared accountability across partners.

### Route & Coverage Analytics

Route-based scheduling and encounter tracking. Coverage maps showing where mobile units are reaching — and where gaps remain by ZIP, tract, and county.

### Dashboards & Reporting

Role-based dashboards for field ops, program leadership, and funders. KPI libraries for navigation completion, referral closure, utilization, and equity reach.

## Built for Mobile Operations

### Settings We Support

- Mobile health units
- Pop-up clinics & outreach
- Field teams & home visits
- Rural route-based programs

### What We Complement

- Clinical EHR/HIE systems
- Telehealth platforms
- Existing scheduling tools
- Grant reporting workflows

### Security & Compliance

- HIPAA-compliant architecture
- BAA included in scope
- SOC 2 aligned controls
- Role-based access controls
